

Let's Do It!

We have now completed our household resource management study and we have a better understanding of how our household uses resources and disposes of waste. Some of us have even started family campaigns to promote better use of our resources. Through this experience, we now know what it is like to encourage alternatively motivated individuals.

Now is the time to take action and apply what we have been studying and share it with others. How are you going to do that? It is your choice. Below is a list of project ideas that you can choose from, or you can come up with your own.

- Energy conservation plan for a household
- Brochure to display at local business
- Composting (includes design and directions)
- Editorial (community and school paper)
- Morning announcements (must have clearly stated purpose and script)
- Town meeting – read local paper and find issues that need to be addressed to improve our environment
- Water Festival-organize a school water festival(theme, events, and advertisement)
- Walk to education (community parade and booth)
- Consumer “shop wise” report (contact Muriel Williman with Orange County Solid Waste Management)
- Create a list of things we can do at home to protect our marine environment.
- Develop a list of local conservation groups and share what the groups do

Rubric

Proposal identifies a clear purpose and audience	5 points
Both group members contribute equally (daily log of group progress)	20 points
Product clearly addresses the purpose and audience	5 points
Product is edited for grammar and accuracy	5 points
Product creatively appeals to the target audience	5 points
Product is delivered to the public	10 points
